Reflection	Name	Role
This activity allowed me to explore more of leading a team, ensuring deadlines, proof-reading all parts, assigning each roles, making sure everyone's participating, and so on... It made me realize	Barbie Xu Anap	Project Manager
I was responsible for applying functions, checking calculations, and making sure that the results were accurate as the Formula and Logic Specialist. This activity made me realize how important	Chriezi Anne Guerrero	Formula & Logic Specialist
As the Quality Assurance and Documentation Officer, I was responsible for reviewing the spreadsheet for errors, verifying formulas and calculations, and ensuring pivot tables and dashboards a	Danielle Oli	Quality Assurance & Documentation Officer
	Joel Patrick Balasa	Pivot Table and Analysis
This activity allowed me to proofread all parts and arrange the dataset. It made me realize that teamwork is indeed powerful. One cannot proceed without the others' input; therefore, teamwork	Johann Ephraim Lambino	Data Entry & Cleaning Specialist
My role in the group was the Formula and Logic Specialist Assistant. I helped apply and check the formulas used in our spreadsheet. I assisted in using formulas like SUM, AVERAGE, IF, COUNT	Kurt John Ibloguin	Formula & Logic Specialist Assistant
My role as the Data Entry & Cleaning Assistant mostly consisted of helping make the tables and correcting little errors from my other group members. I also made some conditional formatting f	Luc Frederic Gamutan	Data Entry & Cleaning Assistant
I was given the role of being the dashboard designer of the group, creating the charts that visualize the data acquired through the sales. I had to make three charts which include the bar, pie, and	Ruvi Anne Undaloc	Dashboard Designer
Quality Assurance and Documentation Reflection		
During this project, our team worked collaboratively to create a comprehensive sales and revenue analytics spreadsheet. Each role contributed to ensure the dataset was accurate, formulas wer		
As the Quality Assurance and Documentation Officer, I reviewed the dataset, formulas, and dashboard visuals to confirm accuracy and consistency. Minor errors in the main data sheet were f		
Overall, the project allowed our team to apply data management, analytical, and visualization skills to a real-world scenario. The structured workflow and role distribution ensured efficiency, and f		

Function	Purpose	Example Formula	Column Used
SUM()	Calculates the total revenue from all sales transactions.	=SUM(H2:H61)	Metrics Section
AVERAGE()	Calculates the average number of units sold across all sales records.	=AVERAGE(C2:C61)	Metrics Section
IF()	Categorizes each transaction as High Sale or Low Sale based on revenue.	=IF(H2>=500,"High Sale","Low Sale")	Sales Category
COUNTIF()	Counts the total number of High Sale transactions in the dataset.	=COUNTIF(I2:I61,"High Sale")	Metrics Section
SUMIF()	Calculates the total revenue for a specific region (example: Maynila).	=SUMIF(G2:G61,"Maynila",H2:H61)	Metrics Section
VLOOKUP()	Retrieves the commission rate for each product category from the reference table.	=VLOOKUP(B2,\$R\$3:\$S\$30,2,FALSE)	Commission Rate
Nested IF()	Determines Bonus Status based on the revenue value.	=IF(H2>=2000,"Eligible",IF(H2>=1000,"Possible Bonus","No Bonus"))	Bonus Status

[1] The average units that were sold include products under the following categories: accessories, audio, beauty, clothing, electronics, fitness, food, garden, grooming, health, home, kitchen, pets, and toys.

[2] High sales include products under the following categories: accessories, beauty products, food (seafood, snacks), kitchen, and toys.

[3] Low sales include products under the following categories: audio, clothing, electronics, fitness, other food categories, garden, grooming, health, and pets.
