Reflection

When making the portfolio the AI followed what I had in mind when I detailed the formatting, using my specifications on the color palette and the fonts, what I had trouble with was figuring out if I wanted the AI generated pictures or if I had to contact some people to get the pictures of my old projects. So at first I tried the AI generated photos which did not fit my vision, the pictures generated were very corporate and muted which was not what I had in mind, so I just used real photos instead. When doing this laboratory I learned that when prompting it's more effective to use factors that are standardized like hexadecimal codes and specific fonts to ensure that the AI cannot misinterpret your meaning, because perhaps you wanted a different shade of didn't like that specific formatting.
